Your Video on the Web™

Internet Video Starter Kit

Osprey-50 Video Capture Card

Osprey Video Capture Cards are the de facto standard for the professional video streaming industry. The Osprey-50 provides all the performance and quality of the worldwide bestseller Osprey-100 - the card bundled with RealNetworks software and universally used for live video streaming on the Internet. Connect your camcorder, VCR or DVD player directly to the Osprey-50 to turn your video into a video stream or save it as a file on your PC.

The Osprey 50-USB Video Capture Device

The Osprey 50-USB is the perfect way to get your home videos onto your PC. The Osprey 50-USB plugs into your PC's USB port (you don't open your PC to install it), and digitizes your home videos so that they can be shared on the Internet. The Osprey 50-USB has both a composite video RCA jack and an S-Video jack, so you can grab video from both consumer and semi-pro video sources, such as camcorders and video cameras.

System Requirements

PC with sound card & 1 free PCI slot or 1 free USB connection

Windows 95/98/NT (PCI), Windows 98 (USB)
(Windows 2000 currently not supported)

120MHz Pentium (200 Mhz MMX or better recommended)

32 MB memory (64 MB or better recommended)

150 MB of free space for software

500 MB or more disk space
(for temporary storage for file creation)

Additional Requirements (not included)

Video source:
camera, camcorder, VCR, DVD player

Composite or S-video cables

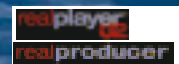

Audio cables for audio source to sound card

SOFTWARE INCLUDED:

RealProducer® and
RealPlayer®

RealProducer is used by millions to create Internet video. The easy-to-use, point-and-click program turns the video being grabbed by your Osprey-50 card into a RealNetworks G2 Stream - the Internet's most widely used streaming format. It also 'compresses' the video so that it only takes up a small amount of disk space and can easily be placed on web sites or emailed. RealPlayer has been downloaded by tens of millions of web users worldwide, and now you can install it in seconds from the *Your Video on the Web* software CD. Play back the video you create or video from the web.

MGI VideoWave II SE®

Use the powerful, but easy to use, VideoWave II SE to edit and create videos - apply audio tracks, titles, transitions, special effects - even mix two clips as one. Use VideoWave's Real-Time preview to view your work as you create it. MGI VideoWave II SE turns your multimedia PC into a video production studio.
