ViewCast **Niagara**
Streaming Media Encoders

GoStream

**The first of its kind, Niagara®
GoStream is a portable streaming
encoding appliance designed to
make capturing and streaming
video a simple, easy to use process.
This single channel encoder is
designed for the most novice of
users. It features three EZStream®
buttons that allow users to select
from pre-defined encoding profiles.**

Internet TV is growing at an exponential
rate, but many potential users do not have
broadcasting experience. GoStream™ makes
Internet video streaming accessible to
virtually everyone.

With its appliance-like design, intuitive
front panel and EASE control menus,
streaming set-up is quick and easy.
Pre-defined encoding profiles allow
streaming to begin at the push of a button.

This portable unit gives the user the
flexibility to be mobile—but with the
optional Dual Dock, it has the power of
rack-mount unit. Also, with optional
wireless capability and GoPack, you can
now stream wire-free.

GoStream creates live streams in a variety
of formats and can be configured to save
encoded content in these same formats to
local or networked mass storage devices
via two built-in network ports: one 1 Gbit
and one 10/100 Mbit Ethernet.

GoStream includes a variety of video and
audio inputs, as well as USB ports and a
front panel dock for iPod or Zen mobile
video devices. You can connect your iPod
or Zen by using a USB port or the optional
adapter. Other options are available to
meet your specific environment needs,
including a Dual Dock rack, wireless
network option and battery packs.
