Tyrell provides Irish Political Party Fine Gael with Streaming Solution from ViewCast

Fine Gael Webcasts Live Coverage from 2009 Ard Fheis Political Conference

PLANO, Texas — April 13, 2009 — ViewCast Corporation (OTCBB: VCST), a developer of industry-leading hardware and software for the transformation, management and delivery of professional quality video-over-IP and mobile networks, today announced that Tyrell:CCT (Content Creation Tools), Ireland's leading reseller of creative technology solutions, provided ViewCast's Niagara® GoStream® SURF solution to Fine Gael, one of Ireland's fastest growing political parties, for use in streaming video content.

"The ViewCast solution was selected by Fine Gael as a key tool in broadening its communications channels, both internally within the party and with the wider public. Fine Gael required a solution that would enable them to stream live video of regular updates, open meetings and question and answer sessions with the party leader and other key members of the organization. ViewCast's Niagara GoStream SURF solution also played an important role in Fine Gael's communication strategy during its Ard Fheis conclave in Dublin, on April 3 and 4. The party used the GoStream SURF to deliver live feeds and commentaries from this key event. The ViewCast solution allows Fine Gael to create a much stronger presence on the Internet," said Michael McLoughlin, Strategic Manager, Fine Gael. "We can communicate much more

effectively with our audience and also react much faster to political events as they unfold. In effect we've got our own self-contained TV channel."

"Fine Gael was originally looking for a portable streaming device that was cost effective, easy to setup and portable enough for use in remote locations, and they found such a solution with ViewCast. We are confident that the GoStream SURF will enable Fine Gael to quickly enhance its political traction and stand out within the Irish political arena," said Bryan Malone, Managing Director, Tyrell.

McLoughlin from Fine Gael added, "Tyrell's support and assistance has helped us to get up and running quickly and smoothly. With the ViewCast solution, there's no reliance on expensive third-party encoding companies or rental companies - we're now fully self sufficient and have incredible flexibility. We're also looking forward to rallying our constituents at our local elections with innovative activities during the election campaign, including a members-only broadcast from the party leader, interviews and video profiles of key candidates."

"Today, the Internet has become more accessible than ever before. Literally any enterprise, school, government agency, religious or charitable organization can leverage this new communication medium to broadcast an event or meeting with Webcasting without massive capital outlays," said Dave Stoner, ViewCast President and CEO. "We're delighted that Fine Gael is using the ViewCast Niagara GoStream SURF to expand their reach to better serve their organization through Webcasting their live events and meetings."

The Niagara GoStream SURF is a powerful solution for streaming events from demanding environments, offering simultaneous Internet and mobile streaming in multiple resolutions, multiple formats and at multiple bit rates. It is a small, light, yet extremely durable self-contained unit that enables users to broadcast on location or anywhere they can access an IP network.
